Formalin Test IMPC_FOR_001

Purpose

To assess nocifensive behaviours triggered by the inflammatory response following a formalin injection.

Experimental Design

Minimum number of mutant animals: 5 males + 5 females
Age at test: 16 weeks

Procedure

1. Acclimatise mice in the testing room for at least 30 minutes before testing.
2. Anaesthetize mouse and administer formalin with a subcutaneous injection into the plantar surface of the chosen paw.
3. Place the mouse into the testing arena and start the recording. Run the recording for up to 90 minutes.
4. Remove the mouse from the arena and clean the arena.
5. Score the behaviour of the animals for nocifensive behaviors between 10 and 60 minutes post formalin administration.

Notes

This procedure can be performed as a terminal or non-terminal procedure. If terminal, euthanize the mouse humanely after the recording.

This procedure is a pilot study from the Pain Phenotyping Pilot

Parameters and Metadata

Total duration of lick/bite behaviour IMPC_FOR_001_001 | v1.0

simpleParameter

Req. Analysis: false   **Req. Upload:** true   **Is Annotated:** false

Unit Measured: s

Derivation: sumOfIncrements('IMPC_FOR_020_001', 1)

Total number of lick/bite events IMPC_FOR_002_001 | v1.0
